Pedro Garrido

Full-Stack Developer | React, Angular, Node.js, .NET Core, TypeScript, AWS

Chile (Open to Relocation) +56 9 7941 1146 pedrogarrido.dev@gmail.com GitHub

Summary

Full-Stack Developer with 3+ years of experience building end-to-end web applications, from responsive frontends to scalable backend services. Proven expertise in modernizing legacy systems into micro-frontend architectures using React and NestJS, achieving 6x performance improvements. Skilled across the entire stack with React, Angular, Vue.js, .NET Core, and Node.js, with hands-on experience deploying containerized applications to AWS and OpenShift. Strong background in designing reusable abstractions and leading technical decisions in cross-functional teams.

Experience

Citi Bank (via Kibernum)

March 2024 - Present

Software Developer

Remote, Chile

Micro-Frontend Architecture Migration:

- Led rewrite of legacy .NET Framework desktop applications into modern micro-frontend architecture using React (frontend) and NestJS (backend).
- Designed and implemented core abstractions, component structures, and utility helpers adopted by the entire team, significantly accelerating development velocity.
- Achieved 6x performance improvement by migrating batch payment file processing from client-side (30s with crashes) to server-side execution (5s, zero crashes).
- Implemented end-to-end CI/CD pipelines using Helix, Harness, and Helm for containerized deployments to OpenShift.

Legacy System Modernization:

- Conducted technical discovery of Java 11 Swing application to identify GUI dependencies for headless migration to Java 21.
- Built automated testing framework from scratch, achieving 80% code coverage (SonarQube) for mission-critical payment processing system.
- Developed Jenkins CI/CD pipelines for .NET Framework applications, including PowerShell infrastructure automation.

Tutelkan

January 2023 - March 2024

Software Engineer

Remote, Chile

- Developed full-stack agricultural technology platform: Vue.js web dashboard, React Native mobile app, NestJS API gateway, and Python ML services.
- Built computer vision pipeline using OpenCV and YOLOv5 for automated fruit quality classification based on size, color, and iodine indicators.
- Designed microservices architecture with PostgreSQL persistence and RabbitMQ for async communication between services.
- Deployed containerized infrastructure on AWS ECS, managing 6 services including API, database, message broker, and ML inference workers.
- Created internal tool to auto-generate specification documents from IceScrum backlog stories, streamlining project documentation.
- Applied Domain-Driven Design principles and clean code practices throughout all projects.

Projects

Agricultural Quality Analysis Platform

2023

Full-Stack Developer

Built full-stack agricultural technology platform with Vue.js dashboard, React Native mobile app for sample collection, NestJS API orchestration layer, and Python computer vision services. Implemented real-time fruit quality classification using OpenCV and YOLOv5, deployed on AWS ECS.

Education

Universidad Andres Bello

2025 - 2027 (In Progress)

Computer Software Engineering

Bachelor's Degree

Centro de Formación Técnica San Agustín

2021 - 2023

Computer Programming

Associate's Degree

6.3/7.0 - Graduated with Honors

Profiles

pedrogarridodev

belcaik

Technical Skills

Frontend

React, Angular, Vue.js, TypeScript, JavaScript, HTML5/CSS3

Backend

.NET Core, NestJS, Node.js, Express.js, Python

Databases

PostgreSQL, SQL Server, Sequelize ORM, RabbitMQ

DevOps & Cloud

Docker, AWS ECS, OpenShift, Jenkins, CI/CD

Practices

REST APIs, Microservices, Micro-frontends, DDD, Git

Certifications

EF SET English Certificate - C2 Proficient

EF Standard English Test

Score: 73/100

Back End Development and APIs

freeCodeCamp

Languages

Spanish

Native

English

C2 Proficient (EF SET 73/100)
