Pedro Garrido

Software Developer | Backend, DevOps & Full-Stack | .NET Core, Node.js, React, CI/CD, AWS

hello@pedrogarrido.dev Chile — Open to Remote & Relocation Portfolio

Summary

Software Developer with 3+ years of experience delivering high-impact solutions for financial institutions. I specialize in backend development, DevOps automation, and legacy modernization, consistently achieving measurable results: 6x performance improvements, 80% test coverage, and $36K+ in annual cost savings through smart automation.

I thrive in environments that value clean architecture, continuous improvement, and cross-functional collaboration. Whether it's designing microservices, building CI/CD pipelines from scratch, or migrating critical systems to modern stacks — I bring a problem-solving mindset and a commitment to delivering production-ready code.

Experience

Citi Bank (via Kibernum) — Remote
Software Developer — March 2024 - Present

Key Achievements:

- Modernized legacy .NET Framework applications into micro-frontend architecture (React + NestJS), achieving 6x performance improvement in payment file processing.
- Built CI/CD pipelines from scratch for 9 enterprise applications using Jenkins, TeamCity, Harness, and OpenShift.
- Eliminated $36K+ annual licensing costs by replacing third-party tools with native automation scripts.
- Implemented testing framework achieving 80% code coverage for mission-critical payment systems.
- Designed core abstractions and utilities adopted by the entire development team, accelerating delivery velocity.

Tutelkan — Remote
Software Engineer — January 2023 - March 2024

Key Achievements:

- Built full-stack agricultural platform: Vue.js dashboard, React Native mobile app, NestJS API, and Python ML services.
- Deployed microservices infrastructure on AWS ECS with 6 containerized services (API, PostgreSQL, RabbitMQ, ML workers).
- Developed computer vision pipeline using OpenCV + YOLOv5 for automated fruit quality classification.
- Applied Domain-Driven Design and clean code practices throughout all projects.

Highlighted Projects

Enterprise Payment System Modernization 2024

Led migration of legacy .NET desktop applications to modern micro-frontend architecture for a major financial institution. Moved batch processing from client-side (30s + crashes) to server-side (5s, stable).

Stack: React, NestJS, .NET Core, OpenShift, Helm, Jenkins

Agricultural AI Platform 2023

End-to-end agricultural technology platform for automated fruit quality classification using computer vision.

Stack: Vue.js, React Native, NestJS, Python, OpenCV, YOLOv5, PostgreSQL, RabbitMQ, AWS ECS

CI/CD Infrastructure Automation 2024

Automated deployment infrastructure for 9 legacy applications, eliminating manual processes and reducing operational costs.

Stack: Jenkins, TeamCity, Harness, PowerShell, Windows Server, OpenShift

Education

Universidad Andrés Bello Bachelor's Degree
Software Engineering 2025 - 2027 (In Progress)

CFT San Agustín Associate's Degree • Graduated with Honors — 6.3/7.0
Computer Programming 2021 - 2023

Technical Skills

Backend

.NET Core, NestJS, Node.js, Python, Java, REST APIs

Frontend

React, Angular, Vue.js, TypeScript, JavaScript

DevOps & Cloud

Docker, OpenShift, AWS ECS, Jenkins, TeamCity, Helm, CI/CD

Databases

PostgreSQL, SQL Server, MongoDB, RabbitMQ

Practices

Git, DDD, TDD, Microservices, SonarQube

Certifications

EF SET English Certificate — C2 Proficient
EF Standard English Test

Back End Development and APIs
freeCodeCamp
