Pedro Garrido

Software Developer | Backend, DevOps & Full-Stack | .NET Core, Node.js, React, CI/CD, AWS

hello@pedrogarrido.dev • Chile — Open to Remote & Relocation • pedrogarrido.dev

SUMMARY

Software Developer with 3+ years of experience delivering high-impact solutions for financial institutions. I specialize in backend development, DevOps automation, and legacy modernization, consistently achieving measurable results: 6x performance improvements, 80% test coverage, and $36K+ in annual cost savings through smart automation.

I thrive in environments that value clean architecture, continuous improvement, and cross-functional collaboration. Whether it's designing microservices, building CI/CD pipelines from scratch, or migrating critical systems to modern stacks — I bring a problem-solving mindset and a commitment to delivering production-ready code.

EXPERIENCE

Citi Bank (via Kibernum) — March 2024 - February 2026 — Remote, Chile

Software Developer

KEY ACHIEVEMENTS

- Led rewrite of legacy .NET Framework apps into micro-frontend architecture (React + NestJS), achieving 6x performance improvement (30s → 5s)
- Built CI/CD pipelines from scratch for 9 applications using Jenkins, TeamCity, Harness, and OpenShift
- Eliminated $36K+ annual licensing costs by replacing PKWARE with native Windows tooling
- Implemented testing framework achieving 80% code coverage for mission-critical payment systems (FlexCube ↔ BankCard)
- Designed core abstractions and utilities adopted by the entire development team, accelerating delivery velocity.

Tutelkan — January 2023 - March 2024 — Remote, Chile

Software Engineer

KEY ACHIEVEMENTS

- Built full-stack agricultural platform: Vue.js dashboard, React Native mobile app, NestJS API, and Python ML services
- Deployed microservices infrastructure on AWS ECS (6 containers including PostgreSQL, RabbitMQ, and ML inference workers)
- Developed computer vision pipeline with OpenCV + YOLOv5 for automated fruit quality classification
- Applied Domain-Driven Design and clean code practices throughout all projects.

HIGHLIGHTED PROJECTS

Enterprise Payment System Modernization — 2024

Led migration of legacy .NET desktop applications to modern micro-frontend architecture for a major financial institution. Moved batch processing from client-side (30s + crashes) to server-side (5s, stable).

Stack: React, NestJS, .NET Core, OpenShift, Helm, Jenkins

Agricultural AI Platform — 2023

End-to-end agricultural technology platform for automated fruit quality classification using computer vision.

Stack: Vue.js, React Native, NestJS, Python, OpenCV, YOLOv5, PostgreSQL, RabbitMQ, AWS ECS

CI/CD Infrastructure Automation — 2024

Automated deployment infrastructure for 9 legacy applications, eliminating manual processes and reducing operational costs.

Stack: Jenkins, TeamCity, Harness, PowerShell, Windows Server, OpenShift

EDUCATION

Universidad Andrés Bello — 2025 - Present

Bachelor's Degree in Computer Software Engineering — In Progress

CFT San Agustín 2021 - 2023
Associate's Degree in Computer Programming
Graduated with Honors — 6.3/7.0

TECHNICAL SKILLS

Backend	.NET Core, NestJS, Node.js, Python, Java, REST APIs
Frontend	React, Angular, Vue.js, TypeScript, JavaScript
DevOps & Cloud	Docker, OpenShift, AWS ECS, Jenkins, TeamCity, Helm, CI/CD
Databases	PostgreSQL, SQL Server, MongoDB, RabbitMQ
Practices	Git, DDD, TDD, Microservices, SonarQube
